Re: Green Finance inquiry - request for information

The Environmental Audit Committee is conducting an inquiry into Green Finance, examining how the UK can mobilise the investment necessary to meet our climate change targets and factor sustainability into financial decision-making. As part of this work, the committee wishes to understand the strategic response of some of the largest UK pension funds to known environmental risks, such as climate change.

As you may be aware, the Government has endorsed the recommendations of the Financial Stability Board's Task Force on Climate-related Financial Disclosures (TCFD), which apply to companies, investment managers, pension funds and other asset owners. The committee is now seeking written evidence on how best these recommendations should be implemented and would welcome your response to the following questions:

1. Do the trustees accept the TCFD conclusion that pension funds are potentially exposed to financial risks through climate change?

2. Which climate-related financial risks are you most concerned about?

3. Has your pension scheme formally considered climate change risk at Board (or Investment Committee) level?
4. If you have considered climate change related risks, what actions have you taken in response to these risks? We are interested, for example, in the development of specific investment strategies on this issue, whether you have taken formal advice, any changes in your investment strategy made or planned, and the exercise of your ownership responsibilities on this issue (either directly, or through your investment managers).

5. Are you planning to adopt the TCFD recommendations in your scheme's reporting? If so, please indicate your planned timing.

6. How would you suggest the Government and regulators implement the recommendations on climate-risk reporting? Is a voluntary approach sufficient to ensure widespread adoption?

7. Would guidance from Government or regulators on climate-risk reporting be helpful for pension funds?

8. Have you discussed climate change with your actuarial advisers, having regard to the Risk Alert that the Institute and Faculty of Actuaries (IFoA) issued to its members last year?

9. Please share with us any other information you think may be relevant as we develop our understanding of the approach UK pension funds are taking to climate change and, more generally, green finance.

Thank you for your attention in this matter. We would appreciate a response by 28th March. Please note that the Environmental Audit Committee intends to publish the responses it receives, including nil returns.

Yours sincerely,

Mary Creagh MP

3. Has your pension scheme formally considered climate change risk at Board (or Investment Committee) level?
4. If you have considered climate change related risks, what actions have you taken in response to these risks? We are interested, for example, in the development of specific investment strategies on this issue, whether you have taken formal advice, any changes in your investment strategy made or planned, and the exercise of your ownership responsibilities on this issue (either directly, or through your investment managers).

5. Are you planning to adopt the TCFD recommendations in your scheme’s reporting? If so, please indicate your planned timing.

6. How would you suggest the Government and regulators implement the recommendations on climate-risk reporting? Is a voluntary approach sufficient to ensure widespread adoption?

7. Would guidance from Government or regulators on climate-risk reporting be helpful for pension funds?

8. Have you discussed climate change with your actuarial advisers, having regard to the Risk Alert that the Institute and Faculty of Actuaries (IFoA) issued to its members last year?

9. Please share with us any other information you think may be relevant as we develop our understanding of the approach UK pension funds are taking to climate change and, more generally, green finance.

Thank you for your attention in this matter. We would appreciate a response by 28th March. Please note that the Environmental Audit Committee intends to publish the responses it receives, including nil returns.

Yours sincerely,

Mary Creagh MP

Chair of the Environmental Audit Committee
Dear Russell

Re: Green Finance inquiry - request for information

Many thanks for coming in to give evidence to the Environmental Audit Committee on Green Finance. Your input was particularly useful.

Having completed our hearings, the committee is now in the process of drafting reports examining how the UK can mobilise the investment necessary to meet our climate change targets and factor sustainability into financial decision-making. As part of this work, the committee is writing to the top 25 pension funds with a number of questions on how they are engaging with the TCFD recommendations.

We would therefore welcome a response from the HSBC pension fund to the following questions:

1. Do the trustees accept the TCFD conclusion that pension funds are potentially exposed to financial risks through climate change?

2. Which climate-related financial risks are you most concerned about?

3. Has your pension scheme formally considered climate change risk at Board (or Investment Committee) level?
4. If you have considered climate change related risks, what actions have you taken in response to these risks? We are interested, for example, in the development of specific investment strategies on this issue, whether you have taken formal advice, any changes in your investment strategy made or planned, and the exercise of your ownership responsibilities on this issue (either directly, or through your investment managers).

5. Are you planning to adopt the TCFD recommendations in your scheme’s reporting? If so, please indicate your planned timing.

6. How would you suggest the Government and regulators implement the recommendations on climate-risk reporting? Is a voluntary approach sufficient to ensure widespread adoption?

7. Would guidance from Government or regulators on climate-risk reporting be helpful for pension funds?

8. Have you discussed climate change with your actuarial advisers, having regard to the Risk Alert that the Institute and Faculty of Actuaries (IFoA) issued to its members last year?

9. Please share with us any other information you think may be relevant as we develop our understanding of the approach UK pension funds are taking to climate change and, more generally, green finance.

We would appreciate a response by March 22nd. Please note that the Environmental Audit Committee intends to publish the responses it receives, including nil returns.

Thank you again for coming in to give evidence and participating in the inquiry.

Yours sincerely,

Mary Creagh MP
Chair of the Environmental Audit Committee
