The past few years have seen exciting developments in the use of broadband technology in telecommunications. Internet telephony (Voice over Internet Protocol or VoIP), Internet Protocol Television (IPTV) and the application of broadband technology in public service delivery can now use broadband internet but do not necessarily require a PC.

POST, in conjunction with Ofcom, are pleased to announce this timely seminar on emerging uses for broadband internet. As well as hearing about current industry initiatives and innovative government uses of broadband internet for public service delivery, there will be an opportunity to use and get a feel for the technology.

**Programme**

2.00pm  **Welcome**
Ian Taylor MP  *(POST Board Member)*

2.05pm  **Introduction**
Peter Philips  *(Partner, Strategy and Market Developments, Ofcom)*
