Healthcare and transport in Tomorrow’s Wireless World:
Wednesday 10th December 2008, 9.30am - 11am
Attlee Suite, Portcullis House

Wireless communications are essential to transport, health, defence, education, entertainment, culture and commerce. New technology in cars which could help to avoid collisions, wireless devices to remind patients to take medication and wireless food scanners which allow shoppers to check food wrappers for potentially harmful content are all in the pipeline and could be a daily reality in a few years.

POST, in conjunction with Ofcom, the UK’s independent communications regulator, are pleased to announce a seminar looking at some of the exciting ways in which advances in technology are being used in health and transport, and the role for regulation in a cutting edge communications sector.

Programme

9.30am    Arrival and refreshments
10.00am   Welcome by chair
10.10am   Presentations
           William Webb, Head of Research and Development, Ofcom
