

### **Contribution from Jordan Milton**

There are two ways in which I think technology can aid in access and usability. The first would be to have them readily available, with a well-designed catalogue system. By this I mean the legislation should be separated into sensible categories, as well as be searchable. This should make it easier for people to find legislation relevant to their interest or needs. The second benefit I think technology can bring is to have annotations on the legislation. This could be used to explain some of the more complex aspects of the legislation in more easily understood terminology. This would make it easier for people unfamiliar with the legal process to understand what the legislation means (this also means I think legislation should be understandable by people not necessarily trained in the legal process).

Integrating citizens' views is probably still best left to having them contact their MP if they think there is something that needs to be addressed. Public forums can be a mess, and to get use out of it someone would have to commit a lot of time to reading through the forums. Much simpler I think to have concerned citizens contact their representative.
